

Task for MongoDB Lab

INF 551

Wensheng Wu

Task

- Write a MongoDB query (using find() function) for each of the following questions:
 1. Find the different (unique) cuisines of "Burger King".
 2. Find restaurants (output their names only) whose name contains "King" (matching is case-insensitive). Output first 10 results (duplicates are ok).
 3. Find the number of cuisines whose category is not "Other".
 4. Find the number of Chinese and American cuisines (that is, either Chinese or American. No need to count "Chinese/Japanese", etc.)
 5. For each cuisine with at least 1000 restaurants, output the cuisine and the number of restaurants of the cuisine.

Submission

- Submit a screenshot for each question, showing the query and the answer
 - Name the file q1.xxx, q2.xxx, ...
